# **Contact Precautions**

#### SIGNAGE

- Contact precautions signage must be posted on the door and by patient's bed in multibed rooms. (See Contact Precautions poster, Catalogue # 0040506, on the Precaution Signs navigation bar on the Infection Prevention and Control website)
- A single-patient room is preferred for patients/residents who require contact precautions
- The door may be left open
- When a single-patient room is not available, consultation with the Infection Control Practitioner is recommended to assess the various risks associated with other patient placement options (e.g. cohorting, keeping the patient with an existing roommate)
- In multi-patient rooms, at least two meters (6 feet or more) spatial separation between bed and curtain is advised to reduce the opportunities for inadvertent sharing of items between the infected/colonized patient and other patients/residents
